

## Draw Request

The Draw Request feature is an iterative form for requesting rehab fund draws. We made several key changes to this feature across different versions of the app design. First, we eliminated redundant information in the application like "rehab property address". Second, we added summative numerics similar to that of the rehab budget feature. Third, we changed the color of the final confirmation screen from a neutral, blank white color to a reassuring green color. Fourth, We changed the format of rehab work selection. In earlier versions, we adopted Wildcat Lending's format and used a drop down list where users can select only one work item at a time, fill in the Rehab Budget Amount and Draw Amount Requested, then open the list again to select a second work item... To avoid this redundancy, we changed the singular choice to multiple choice. Now users can select all desired work items by going through the list only once, or via an auto-recognition type box, then fill in all according numerics after.

Draw Request Sorted Alphabetically
